Response

Web Architecture

client - server

Browser → client, html/css+JS parser / interpreter

Components

- Network -

- Network communication
- creates & sends request to server
→ receives response from server

- Layout Engine / Rendering Engine

- responsible for converting html/css to JS object

- JS Engine

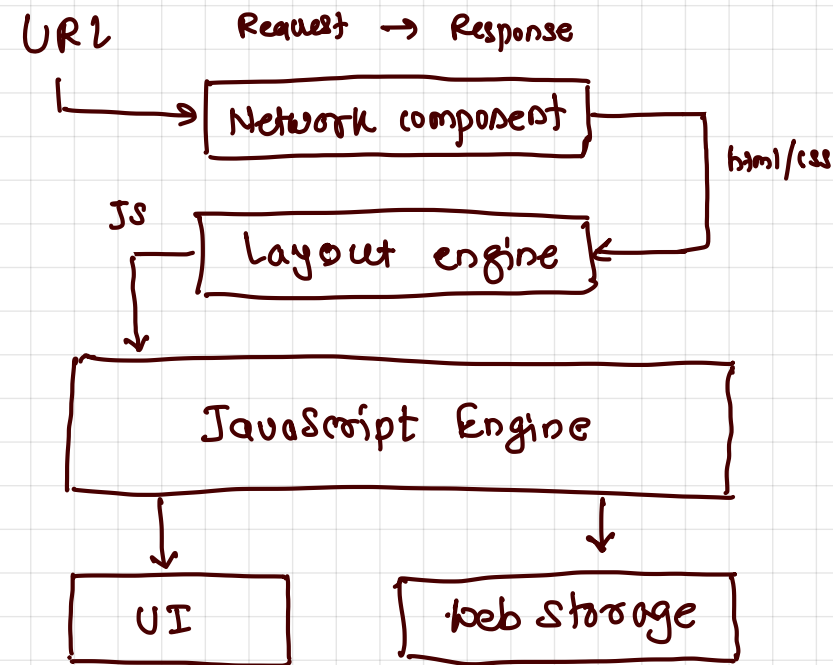

- responsible for executing JS code
- heart of any browser

- User Interface component

- showing the o/p to the user

→ Web storage

- maintaining history / client side data
→ Session storage / Local storage

	Rendering Engine	JavaScript Engine
Internet Explorer / Edge	EdgeHTML	Chakra
Opera	same as chrome	same as chrome
Firefox	Gecko	SpiderMonkey
Safari	-	Nitro / JS one
Chrome	<u>Blink</u>	<u>V8</u> C, C++

* Server → process

→ s/w or app which runs continuously to serve some requests

→ types

→ web server → used to host web sites, eg. apache, nginx, IIS

→ database server

→ Relational → MySQL, MariaDB, Oracle, MS-SQL server, postgresql

→ NoSQL → MongoDB, CockroachDB, Firebase, couchDB, redis, ...

→ mail server → postfix, Dovecot, sendmail etc

→ file server → FTP, Samba (SMB), NFS

→ Development stack (web)

→ collection of multiple servers/programs etc

→ platform + web server + database + user interface framework

eg ① AMP → Apache + MySQL + PHP/Perl/Python

↳ LAMP (Linux), MAMP (macOS), WAMP (Windows)

② WISA → Windows + IIS + SQL server + ASP.net

③ MERN → MongoDB + Express + React + NodeJS

④ MEAN → MongoDB + Express + Angular + NodeJS

MERN

NodeJS → Rhyn Dahl
2009
